

How to install and access REHAU Revit Files

****Important Note****

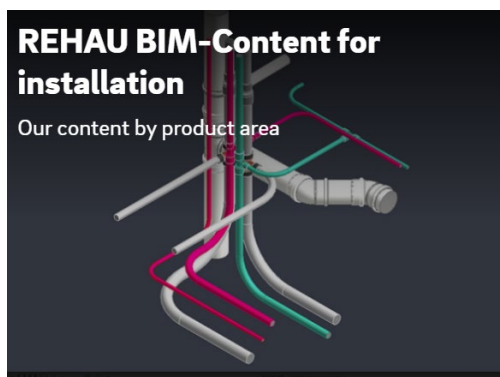

Currently our Revit files are hosted on our global website (steps to download & access outlined below). Some of the files currently available are not tailored to the local Australia / New Zealand (ANZ) markets and as such, some of the product articles available in the files may not be available for purchase in ANZ. Similarly, not all market specific articles may be called up by the software.

While using these files, please refer to the latest version of the relevant product book, available at
<https://myrehau.com/buildingsolutions/library>
<https://myrehau.co.nz/library>

The latest REVIT files can be accessed by following the below instructions:

Download Revit Files-

1. Please visit the REHAU-BIM website for pipe systems: <https://www.rehau.com/sites-en/bim>
2. Click on “REHAU BIM Content for installation”:

3. Scroll down to the relevant pipe system, choose the latest Revit version, and click on “Download (.rvt, .rte, .dyn)”

For example, to download RAUPIANO Plus files for Revit 2027 version, the following link would need to be clicked:

Drainage

Download our free Revit & IFC content for RAUPIANO PLUS drainage system. The download includes pipes & fitting families.

- RAUPIANO PLUS Gallery project - View online
- RAUPIANO PLUS for REVIT 2025 - Download (.rvt, .rte, .rfa, .ifc)
- RAUPIANO PLUS for REVIT 2026 - Download (.rvt, .rte, .rfa, .ifc)
- RAUPIANO PLUS for REVIT 2027 - Download (.rvt, .rte, .rfa, .ifc)

****Please note**** the pipe systems suite contains a number of systems that may not be available in ANZ. Please only design using systems available in your market (E.g. RAUPIANO) by checking the relevant product literature, which can be found at the myREHAU links given above. **If the product book is not available at these links, the product is not available in ANZ.**

By downloading the ZIP file, you will get three documents:

REHAU_RAUPIANO PLUS_Gallery.rvt: a Revit project, with an overview on the different RAUPIANO PLUS products and the possible connections.

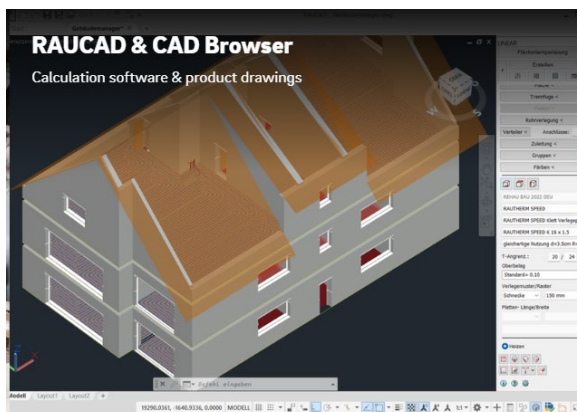

REHAU_RAUPIANO PLUS_Template.rte: where you can start planning your own model/project using RAUPIANO PLUS.

REHAU_RAUPIANO PLUS_PIPES_MATERIAL_NUMBERS.dyn: using this dynamo script you will be able to get the Article numbers of the already drawn pipes and get an estimated count of the single pipes parts.

There is also a feature on the REHAU BIM website that allows users to preview all possible REHAU components online via their internet browser in a 3D environment, without needing to install any additional software.

This can be accessed as follows:

1. Please visit the REHAU-BIM website for pipe systems: <https://www.rehau.com/sites-en/bim>
2. Click on "RAUCAD & CAD Browser"

3. Click on "Open CAD-Portal"

CAD-Browser / CAD-Portal

The user-friendly and easy-to-use REHAU CAD- Browser offers detailed and millimeter-accurate product drawings in multiple views.

[Open CAD-Browser >](#)

The REHAU CAD-Portal is the online version of the CAD-Browser with identical contents, but does not require a separate installation on your computer.

[Open CAD-Portal >](#)

4. Choose the relevant pipe system, then choose the product as required.

If you have any comments on our BIM content, suggestions for improvement or questions, please send us an email to bim@rehau.com
