Enhancing lives

DID YOU KNOW...

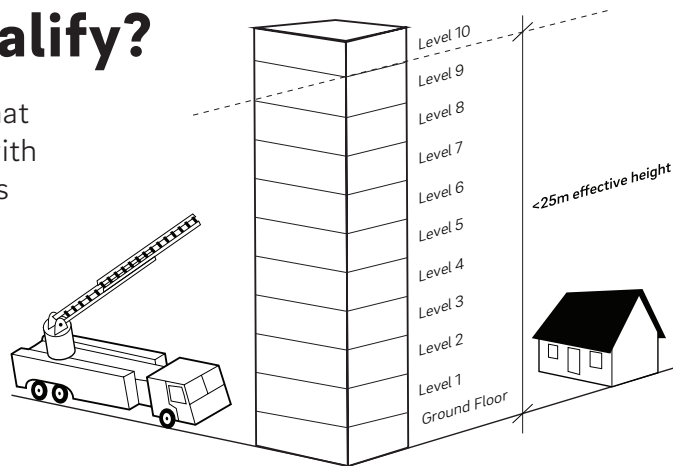

Automatic fire sprinkler systems are now mandatory in class 2 & 3 Residential buildings, increasing safety for the building occupants. **Licensed plumbing contractors are part of the solution.**

The FPAAT01D specification system is the most cost-effective deemed-to-satisfy solution and utilises the drinking water supply for an automatic fire sprinkler system. REHAU's RAUTITAN PE-Xa system is approved for these installations.

Which buildings qualify?

All Class 2 and 3 residential buildings that had building approval after May 2019 with 4 floors or more but less than 25 metres in height.

Why choose REHAU?

A trusted global leader in high performance PEX piping technology with more than 25 years of experience in the Australian plumbing industry.

Local sales and engineering personnel providing training and design support backed by a dependable supply network through our distribution partner, Reece Group.
